Textplot

Small charts inside your query results.

Install & load

```
SET allow_extension_repositories = 'allowed';
CREATE EXTENSION REPOSITORY IF NOT EXISTS query_farm WITH PREFIX 'https://duckdb-extensions.query.farm';
INSTALL textplot FROM query_farm;  LOAD textplot FROM query_farm;
```

01 At a glance

Render a numeric sequence or progress value as terminal-friendly text. Keep the underlying values for sorting and computation; add plots as a compact visual summary.

Numbers → Plot function → VARCHAR chart

02 Core SQL surface

`tp_bar(value, ...)`

Render one value against a configured range.

`tp_sparkline(values, ...)`

Render a DOUBLE list as a compact sequence.

`tp_density(values, ...)`

Render the distribution of a DOUBLE list.

`tp_qr(text, ...)`

Render text as an ASCII or Unicode QR code.

`width := n`

Control chart width with a named argument.

`tp_sparkline_agg(v, ... ORDER BY t)`

Aggregate sparkline per group or window; options go before ORDER BY.

03 Keep in mind

Match the terminal

Use ASCII styles where Unicode width or emoji rendering is unreliable. Dense characters can look different across terminal fonts and exported logs.

04 An ASCII progress bar

```
SELECT tp_bar(0.7, width := 15,
  "on" := '#', "off" := '-');
```

Quote reserved named arguments such as on and off.

05 A sequence & a distribution

```
SELECT tp_sparkline([1, 3, 2, 5, 4, 6],
  theme := 'ascii_basic');

SELECT tp_density([1, 5, 3, 8, 2],
  style := 'ascii');
```

Sparklines preserve sequence; density summarizes the distribution.

06 Aggregate in order

```
SELECT tp_sparkline_agg(value,
  theme := 'ascii_basic' ORDER BY step
) AS trend
FROM (VALUES (1, 4.0), (2, 7.0),
             (3, 5.0)) AS t(step, value);
```

Equivalent to tp_sparkline(list(value ORDER BY step)); chronology stays explicit.

07 In practice

A picture is a string

Plot functions return VARCHAR. Order the numeric data before plotting and sort results on the numbers, not the rendered bars. tp_sparkline_agg skips NULL, NaN and infinite values.
